

Lab: 7

Use animation on image from swish max:

Introduction:

Swish max 4 is an advanced flash certain tools designed for graphic by artists and web developers. It supports animation creation through built in tools, effects, shapes and scripting. It allow user to animate image and text using various effects FADE IN, ZOOM IN etc. An image is spatial representation of any object and may exist in format such as JPEG, PNG and GIF. for instance.

For instance:

- BMDs is used in basic digital logic circuit for shape switching application.
- CMOs is widely used in microprocessors and memory chips due to its lower power consumption and high efficiency.

Objective:

- To be familiar with the swish max 4 tools and interface.
- To apply different animation effects on image.
- To understand how animation can enhance technical and creative presentation.

Materials:

↳ Software used: SWISH MAX 4

Steps:

- 1) Create a new file in SWISH MAX
- 2) Go to file → Import to stage → Image, select a desired image.
- 3) On the timeline, press f6 at the desired frame to create a
- 4) Click Add effect in the timeline section and choose effects.
 - from the first image, apply slide > out to Right and place.
 - from second image, apply size > in from Right and place outside the frame on the right
- 5) Press ctrl+Enter to test animation
- 6) Save the project as: sw and export as .exe

Shortcut keys

Action	Shortcut
Test movie	ctrl+Enter
Run final animation	ctrl+T
New file	ctrl+N
Undo	ctrl+Z
Zoom In/out	ctrl+ +/-

Main

- Properties: Edit color, size and alignment of elements
- Outlines: Organize and manage components.
- Timeline: Add and adjust effects and central frames

Tools

Selection tools: To select specific objects

Discussion and Analysis

Swish Max 4 offers a straightforward and interface for designing animation. Its wide range of built in effect are more suitable for both engineering and professional.
