To create logo design in Macromedia Freehand MX11.

Introduction:

Logo design is the combination of Image and graphics in multimedia. An image is a spectral representation of an object, in a two-dimensional or three dimensional space scene. Logo can be combination of different shapes too. A good logo should have good typography. A image can be in formats like JPEG, GIF, PNG, etc.

Graphics formats are specified through graphics primitives and their attributes i.e. either bitmap or pixmap.

Bitmap is an array of pixel values that map one by one to pixels on the screen and pixmap is a more general term describing a multiple bit-per-pixel image.

There are mainly two types of graphics:

i) Raster Graphics:

Composed of pixels

ii) Vector Graphics:

mathematical representation such as line.

Objectives:

→ To be able to design a simple logo using Macromedia Freehand MX11.

→ To be familiar with the tools in Macromedia Freehand.

→ Vector versus Bitmap

Bitmap

- A bitmap contains an exact pixel by pixel value of an image.
- A bitmap file is fixed in resolution.
- The file size of a bitmap is completely determined by the image resolution and its depth.
- A bitmap image is easier to render.

Vector graphics

- A vector graphic contains mathematical description of objects.
- A vector graphic is resolution independent.
- The file size of a vector graphic depends on the number of graphic elements it contains.
- Displaying a vector graphic usually involves a large amount of processing.

Materials:-

→ Software used: Macromedia Freehand MX 11.

Steps:

- 1) First, use the Ellipse tools to draw the circle holding Shift and alt.
- 2) Duplicate the circle and reduce its size and align it to center of the big circle.
- 3) Duplicate the inner circle.
- 4) Choose the polygon tools and reduce number of sides to 3 to make a triangle.
- 5) Place the triangle inside the inner circle.
- 6) Duplicate the triangle and rotate 180° .
- 7) Use both triangle to form a star like shape.
- 8) In the duplicate inner circle, write a text and align to it.
- 9) The text should wrap around the inner circle.
- 10) Use polygon tool and choose star to make stars in the Logo.
- 11) Use the font "Wingdings" and press shift+7 to draw a book and place it in the center of the logo.

Shortcut keys:

- i) Control + shift + D → Duplicate
It duplicates the choosen object.
- ii) Control + alt + A → Align
Opens a align window to align the object.
- iii) Control + shift + L → make text small
Decrease the font size.
- iv) Control + shift + > → make text big
Increase the font size
- v) Control + shift + Y
Aligns text along the circle.

Tools Used:

- i) Ellipse:- Draw circles
- ii) Polygon:- To draw triangles and stars
- iii) Text:- To write text on the logo.
- iv) Rotate:- To rotate the objects.
- v) Colors:- Used to color the shapes.
- vi) Rulers- To align the objects correctly.

Output

Discussion or Analysis

Macromedia Freehand MX is a good application to design logo. but it is not as easy as it seems. The application is hard to use and requires time to learn the tools to design. We can design a simple to complex design using Macromedia Freehand MX. Overall, it is a great application for designing.

Conclusions

Logo can be designed using Macromedia Freehand MX. The tools present in the application makes it easy to design a simple logo.
